Assignment 2 Instructions

15 min presentation on Oct. 18

1. Identify the 3 main problems with current technologies.

2. List the results of your brainstorming session: present at least 3 "crazy" or novel ideas. Be creative here. But be wary of physics.

3. Pick your top idea (or more than 1) and describe it in some detail. Explain why this is novel & how it will solve the problems you listed in 1.

4. Present preliminary calculations/simulations/analyses of your selected idea. Be as quantitative as you can, but you can leave detailed technical analysis for the next assignment.
